ABOUT QUESTECH

Questech, Inc. is a manufacturer of educational and industrial training equipment. Our product lines include Microbot Robots, the Construction Zone, the Technology Zone, and Custom Furniture Solutions, which we manufacture at our 11,000 sq. ft. manufacturing/training facility in Farmington Hills, Michigan.

Microbot is a leader in robot technology and automation training. The Microbot **TeachMover** is a durable, affordable robotic arm designed to simulate industrial robot operations in the classroom or laboratory and has a population of over 5,000 TeachMovers used in schools, universities, and industrial training programs.

The **TeachMover II**, introduced in 2000, has expanded workcell features. Both TeachMovers can be integrated with software and accessories to create advanced workcells. The **Alpha II** is an industrial robot with the same ease of operation as the TeachMover.

Questech is the primary vendor for UAW/Ford's Technology Awareness Program, an industrial training program intended to help employees understand how technology affects their jobs.

"I personally think the Questech technology laboratories we have set up here in our school are a great tool for allowing students to evaluate many different technical job opportunities. The modules I selected are 'hands on', they get students involved, and you can tell they are excited about them."

John Humble, Vocational Specialist
Patrick Henry Middle School
Woodhaven, Michigan

The **Technology Zone** is designed to provide a total learning experience in each technology workstation. Academic concepts are reinforced as students combine math, science, reading, and social studies with technological advances and systems in career applications. The curriculum helps students to understand the usefulness of the technology and to learn its real-life applications for problem solving in today's society.

Each workstation includes a ten hour hands-on work experience and comes with curriculum, tools, equipment, and supplies.

The **Construction Zone** introduces students to the construction trades and to the technology behind the trades. It provides students a hands-on experience with full-size tools of the trade.

Custom Furniture Solutions allows schools to choose colors and sizes. Our **Locking Workstation**, used in our Construction and Technology Zone product lines, has become popular wherever valuable technology equipment or computer systems need to be secured.
